

HiwiJobs

For our multi-view camera setups, we are looking for committed assistants in video processing. The Section of Computational Sensomotorics works on theoretical neuroscience and technical applications in the field of perception and control.

We offer:

- Working with top-notch multi-camera setups
- Training in deep-learning based image and video processing
- Hands-on experience with high-resolution footage
- Access to experts in machine learning, computer vision and computational neuroscience

Qualifications:

— Basic:

- Familiarity with computers and willingness to learn new software tools.
- Interest in working with our interdisciplinary, multinational team.
- Attention to detail and dedication to producing reliable data.

— Preferred:

- Experience with tracking or photography
- Some knowledge in deep-learning
- Interest in a long-term association with the lab, beyond the position as Hiwi.
